Question Report

CalHHS CDII Data Exchange Framework (DxF) Grant Program Listening Session #2
Question Details

#	Question	Asker Name	Answer
1	can you resend me the qr code	Manuel Rodriguez	Live Answered
2	Will these slides be emailed to the participants of this webinar?	Natalya Alazraie	Hi Natalya, Meeting materials, transcript and recording will be made available at the link that follows: https://www.chhs.ca.gov/data-exchange-framework/#data-exchange-framework-dxf
3	It is my understanding that QHIOs will themselves be signatories to the DxF. Is that still the case? Is there a special category of signatories that are QHIO and aren't themselves providers or health plans?	Jennifer Martinez	
4	We are not understanding why HIEs are not eligible for the educational funding when, at the regional level, they are the most connected with all signatories as part of their participant network.	Stephanie Renick	
5	If QHIOs will in fact be regular signatories to the DxF, will they be able to apply for the ongoarding grants to support other providers connecting with that QHIO?	Jennifer Martinez	
6	Am I correct thinking the deadline for the RFA educational initiative grants is due 10/24/22?	Saskia Garcia	
7	How about if the choices aren't sufficiently granular?	Jonathon Feit	

8	Specifically -- "health information organization" FOR "emergency medical services"	Jonathon Feit	
9	FYI only, not a question. The last poll indicated we could choose more than one yet submitted as soon as I chose one.	Cathy Woodhall	Thanks for flagging Cathy! This was an artifact from a previous version of the presentation. We're specifically interested in the category that best describes your organization.
10	Thank you, Alice!	Natalya Alazraie	
11	The phrasing of the answers in the app are more generally applicable, e.g., "1- = We have an advanced and high performiong HIT system." which also applies to HIOs.	Steven Lane	Hi Steven - thanks for flagging! The language in the app is limited due to space, but please defer to the guidance presented on the slide.
12	Kudos to those who are at a 9 or 10!	Anonymous Attendee	
13	Great to see that the majoity of participants have at least some interoperability functionality available to them.	Steven Lane	Agree!
14	How do I update a response if I 'overvalued' our existing capabilities	Michael Marchant	Thanks for the question Michael! You can press the "trash can" icon on the row you submitted to reset your question answer.

15	Is sharing information in real time really possible? I am not yet aware of a comprehensive systems that works across systems.	Joy Hilty	
16	Is there a deadline date for healthcare entities to upgrade from USCDIV1 to USCDIV2? I heard that it may have past already and need to make sure our community is adhering to these guidelines.	Anonymous Attendee	
17	'@Eben - We should all hope that the work that our organizations do to connect to a QHIO to meet Californiua requirements will also provide access to QHIN services in support of connectivity to the federal Trusted Exchange Framework & COmmon Agreement (TEFCA) which many organizations will want/need to do in the near future to meet federal requirements (CMS, CDC, etc.).	Steven Lane	
18	Can we talk about the question of whether a statewide HIO would be a disaster in-and-of-itself or not?	Jonathon Feit	
19	Important to note that any provider utilizing an EHR that is certified by the federal ONC does have access to HIE functionality, though they may not yet have turned on/implemented this functionality. Only those without EHR or using a non-certified system need to identify HIE functionality outside their system initially.	Steven Lane	

20	How can a CBAS center be qualified if under a managed care?	Mary Hagins	
21	The list of ONC certified Health IT products is available at https://chpl.healthit.gov/#/search	Steven Lane	
22	The list of functions that all certified EHRs are able to perform: https://www.healthit.gov/topic/certification-ehrs/2015-edition-test-method	Steven Lane	
23	How does an HIO compare to an HIE?	Joy Hilty	
24	As we have not defined what an HIO is, some people may have difficulty answering the question. If your system has access to Direct secure messaging, or query-based document exchange via CommonWell, Epic Care Everywhere, the eHealth Exchange, or a regional HIE you are connected to an HIO.	Steven Lane	
25	It depends on how HIO is defined. If its eHealth Exchange or Carequality, then YES. If its a local HIO, then NO	Troy Kaji	
26	Hand raise. :-)	Jonathon Feit	
27	Need to qualify "connected". Will connectivity to a Health Information Network (i.e. Carequality, eHealth Exchange, CTEN) count? Keep in mind those types of connections do not meet all requirements for CMS as they do not include unsolicited ADT's which would facilitate event notifications.	Anonymous Attendee	
28	NICE	Jonathon Feit	
29	an HIO *has* an HIE	Jonathon Feit	

30	can i reply?	Jonathon Feit	
31	Many organizations may want/need to onboard with more than one HIO, as some organizations may not provide all of the services required by a given stakeholder organization. E.g., not all regional HIOs support push messaging via the Direct standard, query-based document exchange via the national Carequality interoperability framework, delivery of CMS-required ADT notifications, etc.	Steven Lane	
32	POLITICS	Jonathon Feit	
33	lack of clarity about who qualifes	Jonathon Feit	
34	Ditto to what Steven Lane asked	Wesley Rishel	
35	Great Point! I would expand and add not just HIO's, but also consider organizations that represent larger subset's of entities.	Anonymous Attendee	
36	one more please	Jonathon Feit	
37	Both Dr. Lane and I work for private for-profit companies. Not clear in general whether we even qualify. Not all HIOs / HIEs are nonprofits or government. If private companies can't participate, then neither Health Gorilla NOR Beyond Lucid Technologies would be able to engage with our partners as he suggested.	Jonathon Feit
